

General Disease–Medicine Dataset

1. Common Cold

- Symptoms: Runny nose, sneezing, sore throat, mild fever
- Common medicines: Paracetamol, saline nasal spray
- Note: Usually resolves with rest and fluids.

2. Fever

- Symptoms: Increased body temperature, chills, weakness
- Common medicine: Paracetamol
- Note: Dosage depends on age, weight, and medical condition.

3. Headache

- Symptoms: Pain or pressure in the head
- Common medicines: Paracetamol, Ibuprofen
- Note: Frequent or severe headaches require medical evaluation.

4. Allergic Rhinitis

- Symptoms: Sneezing, itchy nose, runny nose
- Common medicines: Cetirizine, Loratadine
- Note: Avoid known allergens where possible.

5. Acidity / Heartburn

- Symptoms: Burning sensation in chest, acid reflux
- Common medicines: Antacids, Famotidine
- Note: Persistent symptoms should be evaluated by a doctor.

6. Diarrhea

- Symptoms: Loose or watery stools, abdominal discomfort
- Common treatment: Oral Rehydration Solution (ORS)
- Note: Hydration is especially important.

7. Constipation

- Symptoms: Infrequent or difficult bowel movements
- Common treatments: Fiber supplements, adequate fluids
- Note: Persistent constipation needs medical evaluation.

8. Mild Muscle Pain

- Symptoms: Muscle soreness, localized pain
- Common medicines: Paracetamol, Ibuprofen
- Note: Rest and appropriate hydration may help.

9. Sore Throat

- Symptoms: Throat pain, irritation, difficulty swallowing
- Common medicines: Paracetamol, throat lozenges
- Note: Antibiotics should not be used unless prescribed for a bacterial infection.

10. Cough

- Symptoms: Dry or productive cough
- Common medicines: Dextromethorphan-containing products for some dry coughs; expectorants may be used for some productive coughs
- Note: Treatment depends on the underlying cause.

11. **Migraine**

- Symptoms: Severe headache, nausea, sensitivity to light/sound
- Common medicines: Paracetamol, Ibuprofen
- Note: Recurrent migraines may require prescription treatment.

12. **Motion Sickness**

- Symptoms: Nausea, dizziness, vomiting during travel
- Common medicine: Dimenhydrinate
- Note: Some medicines can cause drowsiness.

13. **Athlete's Foot**

- Symptoms: Itching, scaling, cracking between toes
- Common medicines: Clotrimazole, Terbinafine topical
- Note: Keep the affected area clean and dry.

14. **Mild Skin Allergy**

- Symptoms: Itching, redness, rash
- Common medicines: Cetirizine, topical anti-itch preparations
- Note: Severe swelling or breathing difficulty requires emergency care.

15. **Iron-Deficiency Anemia**

- Symptoms: Fatigue, weakness, dizziness
- Common medicine: Iron supplements
- Note: Iron should ideally be taken after confirming iron deficiency with a healthcare professional.

16. **Vitamin D Deficiency**

- Symptoms: May include bone/muscle weakness or no obvious symptoms
- Common treatment: Vitamin D supplements
- Note: Supplementation should be based on appropriate testing/medical advice.

17. **Type 2 Diabetes**

- Symptoms: Increased thirst, frequent urination, fatigue; sometimes no symptoms
- Common medicines: Metformin and other prescription medicines
- Note: Requires diagnosis and ongoing medical supervision.

18. **Hypertension**

- Symptoms: Often no symptoms
- Common medicines: Amlodipine, Losartan, other antihypertensives
- Note: Medication must be selected and adjusted by a healthcare professional.

19. **Asthma**

- Symptoms: Wheezing, coughing, shortness of breath
- Common medicines: Salbutamol inhaler, inhaled corticosteroids
- Note: Inhaler treatment depends on severity and medical assessment.

20. **Bacterial Infection**

- Symptoms: Depend on the affected body system
- Common medicines: Antibiotics such as Amoxicillin in appropriate infections
- Note: **Antibiotics require appropriate diagnosis/prescription and should not be self-started.**
